

## **WP2 – Implementation of the survey**

**WP leader: partner 4, SE – Semmelweis University**

The aim of the workpackage is to carry out the survey planned in WP1 in the partner universities in order to map the situation and perspectives of female researchers at the universities in the field of life sciences and engineering.

The first step of the survey will be collecting **existing statistics** and data on female and male researchers in the faculties and mapping the working environment as well as university and faculty policies regarding gender equality. The **questionnaires** will be distributed among researchers, both female and male, in each participating faculty. Altogether 16 **interviews** will be prepared in each faculty with PhD students, researchers and decision makers in correlation with their proportion on the faculty. Some female university researchers will be identified as role models and case studies will be prepared to be included in the university reports. The **university reports** will be prepared in English and in the relevant national language and presented on the website of the project.
